The Scenario

Today a business owner has plenty of options when it comes to implementing SaaS Solutions such as online accounting software, as there is a wide range of commercial accounting software and applications available online in the market. It may become difficult for you to judge the right accounting system and a reliable accounting service provider for your business. Generally small business owners don't need complicated software for their accounting operations. However for small and medium businesses, online accounting software need to be robust, scalable, and fast. On the other hand, it is difficult for them to spend sizable amount of such applications by incurring CAPEX expenditure.
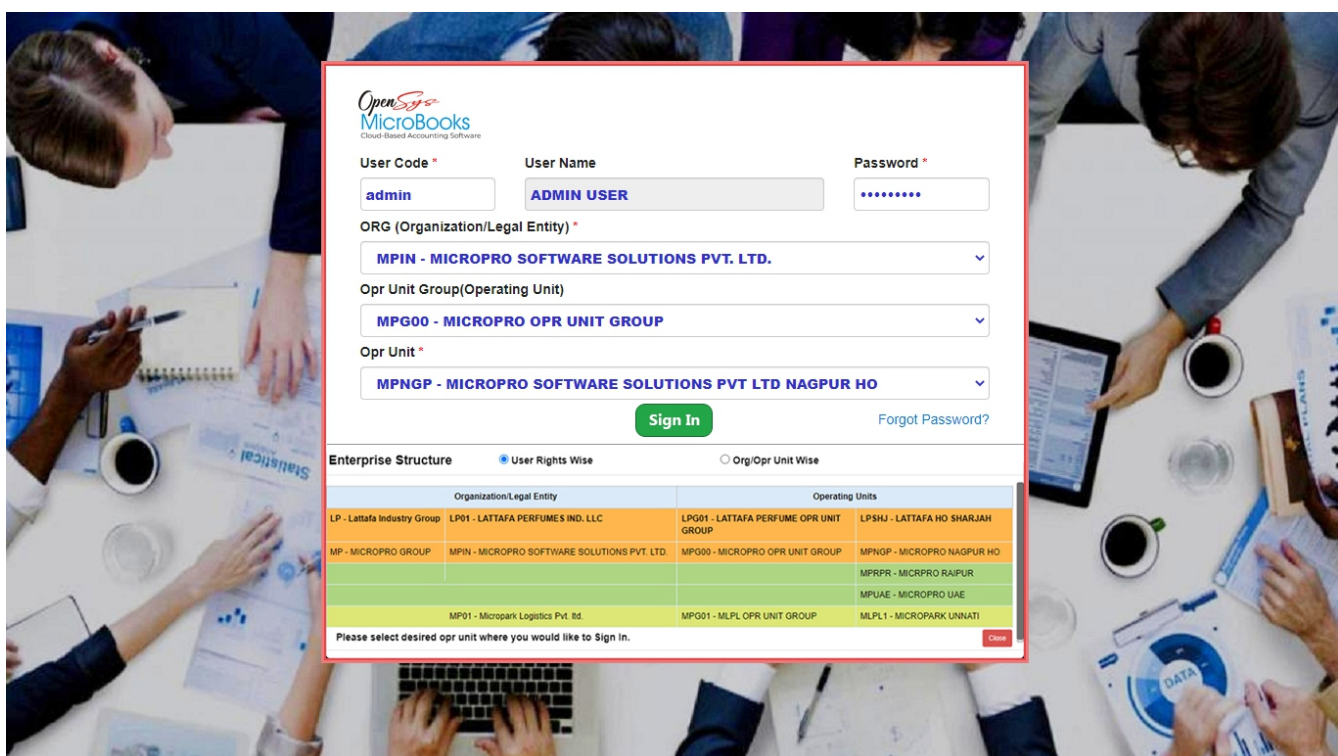

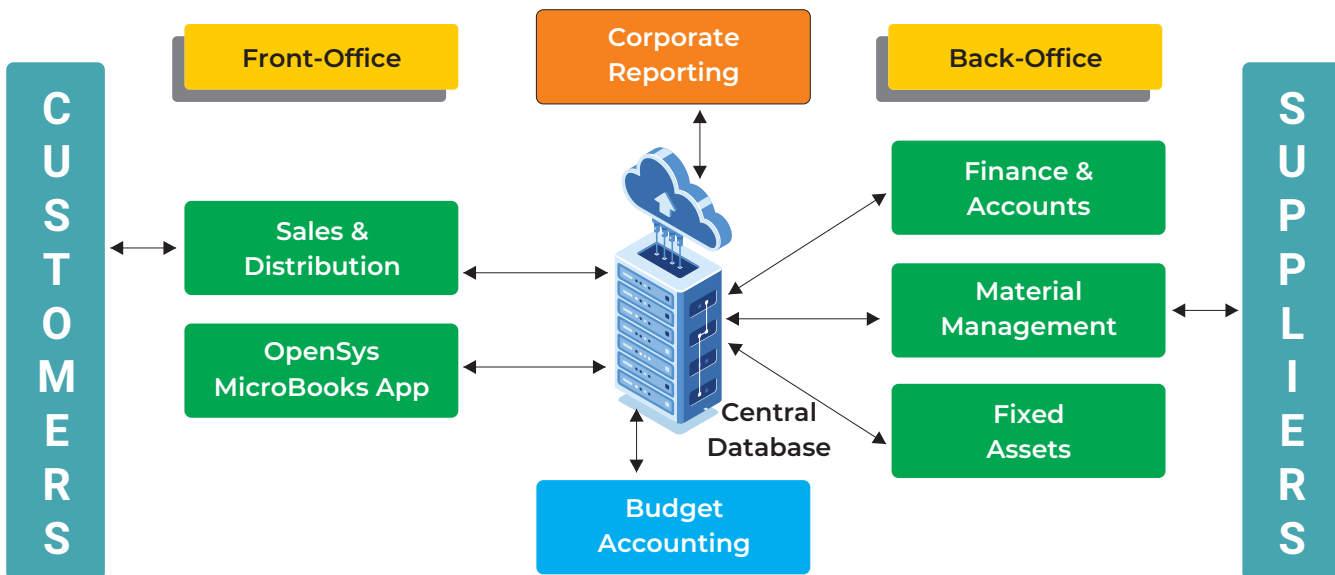

Why Micropro?

Micropro Software Solutions Ltd. a 35 Years old established software company having designed, developed , implemented and maintained software application for various verticals in private as well as the Govt. sector. We have expertise in developing applications in the field of Finance and Accounting, Sales and Inventory, Payroll etc. and served Govt. and Private organizations as well. The Micropro OpenSys MicroBooks is the outcome of this vast experience and caters all Business Financial Needs through it. The Software is Built on Open Source Technology which makes it more cost effective and is Robust as well. It is a Cloud based software available on SaaS basis making it scalable with easy deployment. Micropro is making continued efforts to enhance the functionality of this software from time to time as per industry requirements and legal compliance.

OpenSys MicroBooks

- Ready to use business solutions at unmatched costs with some features of SAP are readily available in the system.

- OpenSys MicroBooks also provides key capabilities and several features integrated into the system along with Built-In operational controls.

Finance & Accounts

Finance and Accounts is important to any business as it aids in understanding the finance situation at particular point. Tracking Accounts Payable and Accounts Receivable , Billing, payment, and reconciliation of accounts is major outcome of this module. It shares information needed to prepares various reports including Balance Sheet, profit and loss statement. It manages General Ledger. Furthermore Asset Management, and Cash Management is done by finance and accounts module. Manual calculations are eliminated thereby avoiding calculation errors.

Material Management

Material management module manages identification of source of supply, comparison of quotations, evaluating the right quotation, create purchase orders, track the status of purchased material, and verifying the invoices upon receiving the material.

Sales & Distribution

Sales & Distribution module handles all the sales & dispatch related activities, client profile management, captures sales order, schedules order, handles shipping, track invoices and sales return. Dispatch part handles dispatch activities, Multiple dispatches on single sales order, tracking of goods, and conforming delivery of goods. These processes are done automatically in this software.

Budget Management

Budget module provides various features which regulates costs for given periods of time or such related to particular projects and activities. Compare and plan the budget in accordance with their long-term financial goals. The Budget feature is the key to superior decision making, enabling companies to use current expense data to plan and to report.

Fixed Assets Accounting

Fixed-asset accounting module records all financial activities related to fixed assets. The practice details the lifecycle of an asset, such as purchase, depreciation, audits, revaluation, impairment and disposal. In a company's books, each asset has an account, where all the financial activities related to fixed asset are recorded.
